

Greater Year-Round Comfort & Savings

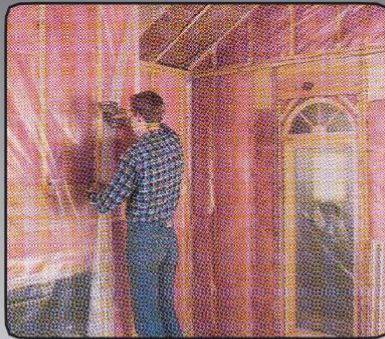

Recommendations from the Department of Energy for Attic Insulation for our area is R-49 to R-60

AS A HOMEOWNER YOU NEED TO KNOW

- Insulation is the least expensive & most effective way to conserve energy
- Quality workmanship is as equally important as quality materials
- Ventilation is as important as insulation

A typical home loses up to 45% of its heat through the attic. Installing the recommended level of insulation in your attic can significantly reduce the amount of energy it takes to heat and cool your home. Lower monthly energy bills make your home more attractive to buyers.

For new homes, our insulation together with our “infiltration stop” has maximum effect on conserving energy for many years. We are committed to offering you **only the best** products available today by Owens Corning. Our work is backed up with a written warranty for as long as you are the owner. That applies for **Residential and Commercial**.

Unlike regular roof vents or ridge vents that get covered up by four inches of snow, our special “Attic Ventilator” effectively draws air and moisture out from the attic by means of winds propulsion through louvers, causing suction out of the vent without getting covered up by snow, because of the whirl it creates. This suction effect exhausts heat in the summer and moisture in the winter with no moving parts. Our **Attic Ventilator** can allow for an **Energy Savings Up to 25%**
